

Anton Samoshuk

.Net Software Developer

+375 (29) 558-06-32 toni.samoshuk@gmail.com https://telegram.me/dk_tengen [LinkedIn](#)

.NET Software Developer with **2 years** of experience in API development, as well as frontend and backend support. I create solutions that optimize processes, increase system stability and improve user experience. I confidently work with modern API development technologies, as well as monitoring tools, **OpenTelemetry** and **Grafana**. I strive to create scalable and reliable solutions for business.

Experience

- .NET Software Developer**
NDA

Nov, 2024 - Present
- Designed and implemented from scratch a comprehensive management system for critical objects, providing a full data lifecycle. Developed more than 25 API endpoints supporting complex business logic, integration with third-party services and data export.
 - Developed a background service with batch file processing, implemented transaction processing with rollback on errors, created a table for outbox to track the migration status of each file and a retry mechanism.
 - Implemented modern architectural patterns (CQRS) and a comprehensive validation system, which increased the reliability and fault tolerance of the system.
 - Optimized work with databases and implemented caching, which allowed the system to work stably with large volumes of data under high load.
 - Created a centralized system for monitoring the health of all key components of the system (DB, external services, application). This allowed real-time tracking of performance metrics and prompt response to incidents, reducing the time to resolve them.

Stack: C#, ASP.NET Core, DDD, PostgreSQL, SQL/Dapper, EF Core, Minio, Redis

- .NET Software Developer**
Polessky State University

Jun, 2023- May, 2024
- Developed a modular platform for internal communications and operations management on .NET with integration of messenger solutions. Implemented a microservice architecture to separate the functionality of notifications, data management and analytics.
 - Implemented bots for automatic sending of operational notifications, reports and official messages to employees.

Stack: C#, ASP.NET Core, PostgreSQL, EF Core

Skills

C# ASP.NET EF Core Dapper PostgreSQL MS SQL Docker Git RabbitMQ Redis Grafana Async Programming MinIO

Education

Polessky State University Bachelor's degree in software engineering
2020 - 2024
