

Anton Samoshuk

.Net Software Developer

+375 (29) 558-06-32 toni.samoshuk@gmail.com https://telegram.me/dk_tengen [LinkedIn](#)

.NET Software Developer with **2 years** of experience in designing and developing high-load systems. Specialized in building fault-tolerant and high-performance backend solutions using **C#** and **ASP.NET Core**. Key competencies include performance optimization, implementing caching and monitoring systems to enhance application stability.

Experience

- .NET Software Developer**
Military Academy "MA RB" November 2024 – Present
 - Participated in the development and optimized backend modules for a management system based on a microservices architecture.
 - Optimized the performance of a key reporting API: conducted analysis and refactoring of SQL queries, implemented Dapper, and added missing indexes in PostgreSQL. Result: Reduced response time from 2000 ms to 200 ms.
 - Implemented Redis caching for frequently requested endpoints. Result: Reduced database load and improved performance by 40%.
 - Developed a fault-tolerant background service for batch file processing with full transactional logic and rollback capabilities in case of errors.
 - Developed the user interface: created and integrated new components, services, and modules in Angular.
 - Set up a Grafana-based monitoring system to track application health metrics. Result: Reduced incident detection time from 30 minutes to 2-3 minutes.
 - Participated in code reviews and assisted in onboarding two new junior developers into the team.

Stack: C#, ASP.NET Core, PostgreSQL, SQL/Dapper, EF Core, Minio, Redis, CQRS, Jira, Docker, TS, Angular

- .NET Software Developer**
Polesie State University June 2023 – May 2024
 - Participated in the development of a microservices platform for internal communications.
 - Implemented business logic for services and REST APIs.
 - Developed and integrated bots for automating report distribution and notifications using RabbitMQ. Result: Reduced time spent on routine operations by 25%.

Stack: C#, ASP.NET Core, PostgreSQL, EF Core, RabbitMQ

Skills & Technologies

- Programming Languages: C#
- Frameworks & Platforms: ASP.NET Core, Entity Framework Core
- Databases: PostgreSQL, Dapper
- Tools & Technologies: Redis, RabbitMQ, Docker, Minio, ELK, SignalR
- Architectural Patterns: Microservices, CQRS
- Other: Monitoring Systems (Grafana), GraphQL, Code Review, Teamwork

Education

Polesie State University Bachelor's Degree in Software Development
2020 - 2024
